A series of monthly webinars in Heart Failure

ABOUT THE PROGRAM:

Heart Failure is emerging as a public health problem in our country. The three- year mortality of 45% as reported in the Trivandrum HF registry is higher than many common cancers.

The registry data has shown us that guideline directed therapy is prescribed to only 25 – 40% of patients with heart failure, indicating that there is a significant scope for quality improvement initiatives among the treating practitioners. One of the ways is to have continuing educational programs to increase the awareness about the disease burden and the importance of evidence based therapy

To this end the HFAI has decided to conduct virtual symposia during the first week of every month on various aspects of heart failure with international and national HF specialists joining in as faculty. This will be an in-depth discussion on a particular topic in HF management. This academic initiative is planned for a year. You are invited to join us and actively interact to make the program a success.
